Overview

The Community Health Improvement Plan (CHIP) Steering Committee endeavored throughout 2011 and 2012 to create a CHIP for Marion County that is aligned with the priority goals, strategies and objectives of national and state public health partners; and is relevant to the needs of our local communities. The Public Health Accreditation Board (PHAB) defines a CHIP as:

“...a long-term, systematic effort to address health problems on the basis of the results of assessment activities and the community health improvement process. This plan is used by health and other governmental education and human service agencies, in collaboration with community partners, to set priorities and coordinate and target resources. A CHIP is critical for developing policies and defining actions to target efforts that promote health. It should define the vision for the health of the community inclusively and should be done in a timely way."

While only a relatively small team was involved in the creation of the CHIP, the entire community is involved in its successful implementation and communication – why and how it was created, what it includes, who is responsible for success – is critically important to keep all partners and stakeholders engaged and aware of what is happening and how their actions and contributions help impact the plan’s success. Communication began as the plan was being developed and has continued throughout implementation to report on progress, plan changes and key milestones achieved.

The CHIP process began with a comprehensive health needs assessment of Marion County. The Marion County CHIP Steering Committee utilized the Center for Disease Control (CDC) and National Association of City and County Health Officials’ (NACCHO) Mobilizing for Action through Planning and Partnerships (MAPP) model to engage WellFlorida Council (www.wellflorida.org), the statutorily designated (F.S. 408.033) local health council that serves Marion County, to conduct the community health needs assessment.

The MAPP Technique for needs assessment includes four key elements:

- **Community Themes and Strengths Assessment (CTSA)** – probes residents to gain a deeper understanding of the issues that they feel are important regarding community health.
- **Local Public Health System Assessment (LPHSA)** – utilizes the Ten Essential Public Health Services and performance standards for each to determine the extent to which all of the entities and organizations that contribute to public health are collectively achieving these standards.
- **Community Health Status Assessment (CHSA)** – identifies priority community health and quality of life issues through extensive data analysis.
- **Forces of Change Assessment (FCA)** – identifies forces, trends and events such as legislation, technology and other impending changes that affect the way a community and its health system operate and that may help or hinder community health improvement.

During the MAPP process, the CHIP Steering Committee formed a Core Community Support Team (CCST) with more than 50 partners from the community who represented not only many different areas of health and well-being but also government, education, businesses and social services sectors.

While conducting four community workshops, the CCST assisted in the review of information gathered from available health databases as well as data and information generated from community meetings, focus groups and surveys. Under the auspices of the needs assessment process, this information was
collected and analyzed to take a closer look at the health of the people who live in the county as well as the things in the county that affect their health status.

The Marion County MAPP Community Health Needs Assessment was completed and released in June 2012 and first updated in July 2013. This current update has a release date of August 2014. Ultimately, the CHIP Steering Committee utilizes the results of the MAPP assessment process to formulate this CHIP for Marion County. In simple terms, the CHIP is designed to do the following:

- Prioritize health conditions which impact residents
- Develop goals, measurable objectives and implementation strategies to address the top health priorities
- Incorporate health plan goals and strategies into day-to-day activities of community partners
- Annually review progress on goals, objectives, and strategies.

The CHIP Steering Committee utilized many assets and resources in creating the Community Health Needs Assessment (CHNA) and CHIP:

- Mobilizing for Action through Planning and Partnerships (MAPP) framework, developed by the National Association of County and City Health Officials and the Centers for Disease Control CDC
- Community health needs assessment activities were funded by the Florida Department of Health through grant funds that originated with the U.S. Department of Health and Human Services in their efforts to promote and enhance needs assessment and priority setting and planning capacity of local public health systems
- A Core Community Support Team (CCST) comprised of 50 members
- Marion County Health Care Citizens Advisory Board, appointed by the County Commission
- A cross-sectional group representing local public health system partners (comprised of a local hospital administrator, a Federally Qualified Health Center (FQHC) administrator, primary care providers, health department Director and staffs, and community leaders)
- Marion County resident focus groups (9 Focus Groups – 2 via conference calls; 7 held at area hospitals, community organizations, residential communities, ad institutions of higher learning; participants for focus groups were recruited by advertisements posted at local shopping centers, the Florida Department of Health in Marion County, churches, community centers, libraries, and through word-of-mouth recruiting)
The Marion County CHIP Process

Methodology

In order to refine issues and strategies obtained during the community health needs assessment process, the CHIP Steering Committee revisited all of the data and information elements of the community health needs assessment. This review preliminarily determined the key issues and the common themes in Marion County’s greatest problem areas. The CHIP Steering Committee utilized a sequence of in-person and online work sessions to identify key issues; prioritize key issues; identify strategies for priority issues; and establish objectives for strategy activity to preliminarily identify some critical next steps to jumpstart community-wide implementation of the CHIP.

Members of the CHIP Steering Committee originally conducted five in-person work sessions (May 21, June 19, July 25, August 2 and September 13, 2012) to review the MAPP needs assessment and the priority issues identified and to refine those issues and formulate a response which ultimately became the CHIP. Similar sessions have been conducted during successive updates for consistency.

As a part of the Work sessions, in addition to in-person deliberations and consensus-building, the CHIP Steering Committee utilizes Survey Monkey (software application for conducting surveys) and other internet-centered activities to help foster development of the plan. DOH-Marion (CHD) provides technical and administrative assistance as well as facilitation for the Steering Committee’s work sessions.

During the workshops, members dissect the priority issues identified and finalize a core set of priority issues. Between public meetings, members participate in online priority ranking exercises utilizing SurveyMonkey in order to prioritize the list of issues based on their magnitude of importance in Marion County and the likelihood that these issues could be substantially and positively impacted through local efforts.

At the August 2 work session, members reviewed priority rankings and finalized a ranked list of all key issues. In addition, the Steering Committee brainstormed a list of strategies for each of the key priority issues. Prior to the final meeting, the CHIP Steering Committee shared additional potential strategies online.
The final work session was held on September 1, 2014. During this meeting, the primary strategies were finalized for each priority issue and identified goals and objectives for each of the major issue areas and strategies as well as critical next steps. To conclude the process, all of the information generated during the in-person work sessions and online sessions to create the draft CHIP report were compiled and consolidated in order to create the current update.

**Focus on the Social Determinants of Health**

During the MAPP and CHIP processes, Steering Committee members observed that there are two types of issues underlying the findings throughout the needs assessment. These persist in 2014. First, Steering Committee members noted that there is a clear set of “traditional” system and outcome issues that are almost always uncovered during needs assessment processes in Marion County and throughout north central Florida. These traditional system and outcome issues include disproportionate death and disease rates; low physician and provider ratios; inappropriate utilization of healthcare resources; rural healthcare access issues; and information and referral and patient navigation difficulties.

A second, more non-traditional set of issues, observed by the Steering Committee members centers on the social determinants of health access and health outcome that are more often than not the drivers of the traditional issues. Social determinants are quite often the root causes of traditional health care and health outcome issues. Sadly, these social determinants are not often dealt with proactively, but instead are dealt with reactively. Steering Committee members observed that this is the equivalent of choosing to manage a disaster rather than trying to prevent it.

Over the last five decades, health researchers and practitioners have changed the way we understand the factors that lead to chronic disease and affect poor health (or conversely that prevent chronic disease and lead to good health). For most of the 20th century, health outcome was considered primarily the result of biomedical cause and effect and poor lifestyle choices. As early as 1948, the World Health Organization (WHO) declared that “more than the absence of disease, health is a state of complete, physical, mental and social well being and not merely the absence or presence of infirmity.” This perspective set in motion the concepts of the social determinants of health that resonate throughout community health analysis today.

Social determinants are basically the social factors and conditions, including income, education, employment, housing and others that lead to healthy people and communities. Forty years after the WHO pronouncement, Health Canada developed a comprehensive list of what they called simply the *determinants of health*. These factors included income; social support; education and literacy; employment; working conditions; social environments; physical environments; personal health practices; coping skills; healthy child development; biology; genetic endowment; health services; gender; and culture. While clearly all of these factors have an impact on health outcome, the vast majority are social factors and not necessarily traditional health behaviors or related to biomedical cause and effect.
The impact of these social determinants is powerfully communicated in Figure 1. The “Health Gradient” is another effort to communicate WHO faces the uphill struggle that personal health is, as the impact of health hazards is created or magnified by the presence of often seemingly intractable social factors and conditions.

![Image of The Health Gradient]

**Figure 1. The Health Gradient – Individual Health is an Uphill Struggle for Our Community**

Statistics compiled as part of the Marion County Community Health Needs Assessment show that these social determinant factors are firmly established in Marion County. These factors include, to name but a few:

- Lower percentages of residents with high school and college educations;
- Unemployment at levels substantially higher than the state of Florida;
- Dramatically higher rates of children in poverty;
- Substantially higher percentages of single-parent homes;
- High percentages of the population with limited access to healthy foods;
- Per capita, median and average income levels much lower than state of Florida averages;
- Nearly 45 percent of the population either uninsured or utilizing Medicaid;
- Comparably limited access to recreational activities (in the 6th percentile for Florida).
With the uphill struggle Marion County residents have due to these social determinants, it is not surprising that:

- Marion County has a significantly higher overall age-adjusted mortality rate, nearly 9 percent higher than the state in 2007-09 (725.6 per 100,000 for Marion vs. 666.7 per 100,000 for the state). When adjusting for age, residents of Marion County fare worse than the state as a whole on age-adjusted death rates (AADRs) for nine of the top ten causes of death with an exception of age-adjusted mortality rate for stroke.

- In both Marion County and the state as a whole, the majority of deaths can be attributed to chronic diseases.

- Racial disparities are present in Marion County as in the rest of the state. In particular, during 2007-2009, black residents in Marion County had a 14% higher overall age-adjusted mortality rate compared to white residents (815.7 and 710.6 per 100,000 respectively).

- The rate of emergency department visits per 1,000 for mental health reasons increased 71 percent in Marion County (48.7 in 2005 and 83.4 in 2009) as opposed to an increase of only 37 percent at the state level (34.7 in 2005 and 47.7 in 2009).

- Overall, poor health behaviors are generally on the rise in Marion County as measured by the Behavioral Risk Factor Surveillance System (BRFSS) in nearly every major measurement category.

- In 2009, Marion County had an avoidable hospital discharge rate (per 1,000 residents) of 13.7. A little over 30 percent of the year 2009 avoidable discharges were paid for by Medicaid.

- Life expectancies of residents of Marion County are lower than state and national averages, and life expectancies of black residents are 5-6 years shorter than that of white residents, based on a University of Washington study.

The impact of these social determinants is also readily seen in the Robert Wood Johnson/University of Wisconsin (RWJF/UW) County Health Rankings, which have been published annually since 2010 (Table 1). RWJF/UW ranks the counties in Florida in a variety of health areas.

Despite the high marks in the rankings for Marion County’s healthcare system, whose clinical care rank among Florida counties has risen from 23rd in 2010 to 17th in 2012, the overall health outcomes and health factors rankings of the county persist in the bottom 25% of counties in Florida. Even with the high clinical care rankings, Marion County currently ranks 49th in morbidity and 46th in mortality in the state primarily fueled by its extremely low rankings in the areas of health factors that represent social determinants of health such as social and economic factors; health behaviors; and physical environment, which collectively represent 80 percent of the county health ranking score (Figure 2).
Figure 2. Robert Wood Johnson/ University of Wisconsin Population Health Institute County Health Rankings Model

The message is clear that despite Marion County’s increasingly improving efforts in clinical care delivery, the community as a whole has become less healthy as social determinant pressures have mounted.

Key Health Issues That Can be Addressed at the Local Level

The following is a list of key health issues identified during the Marion County Community Health Needs Assessment process that can be addressed at the local level, and are community health priorities:

- The social determinants of health are not adequately addressed in Marion County.
- Low income, high poverty and limited economic base continue to be leading predictors of health outcome and health access in Marion County both on an individual and county-wide basis.
- Unemployment at levels substantially higher than the state of Florida.
- Marion County has a significantly higher overall age-adjusted mortality rate, nearly 9 percent higher than the state in 2007-09 (725.6 per 100,000 for Marion vs. 666.7 per 100,000 for the state). When adjusting for age, residents of Marion County fare worse than the state as a whole on age-adjusted death rates (AADRs) for nine of the top ten causes of death with an exception of AADR for stroke.
- Life expectancies of residents of Marion County are lower than state and national averages, and life expectancies of black residents are 5-6 years shorter than that of white residents.
- In both Marion County and the state as a whole, the majority of deaths can be attributed to chronic diseases.
- Racial disparities are present in Marion County. In particular, during 2007-2009, black residents in Marion County had a 14% higher overall age-adjusted mortality rate compared to white residents (815.7 and 710.6 per 100,000 respectively).
- High percentages of the population with limited access to healthy foods.
- Lower percentages of residents with high school and college educations.
- Comparatively limited access to recreational activities (in the 6th percentile for Florida)
- Overall, poor health behaviors are generally on the rise in Marion County as measured by the Behavioral Risk Factor Surveillance System (BRFSS).
- Marion County is near the bottom 25% of counties in Florida based on health rankings from the Robert Wood Johnson Foundation and the University of Wisconsin.

Community Health Priorities

After a careful study of the health needs assessment and the key issues identified by the assessment, the CHIP Steering Committee reached consensus on four community health priorities that cut across the key health issues. A focused public health plan must be developed that addresses social determinants in the following domains that impact health outcomes:

- Economic Environment - A solid economic environment entails commercial investment, a focus on providing jobs that take people out of poverty and offer healthcare coverage and businesses that provide healthy food options and healthy choices for residents. A positive economic environment sensitive to those social determinants of health influenced by economics gives people not only a path to opportunity but a path to health and wellness.
- Social Environment - A social environment that promotes strong social networks, partnership and cooperation can result in residents advocating for change, cultivating a community garden, volunteering or providing services in new ways that strengthen community ties, empower individuals to be advocates for themselves and change agents for their communities and may ultimately lead to improvements in personal and community health.
• **Physical Environment** - Safe parks; full-service grocery stores and/or farmers’ markets; safe, walkable streets; less traffic; well-maintained housing; and open spaces that encourage community gathering are all protective factors that contribute to the health of a community and have a positive impact on the health of residents. Likewise, residents’ geographic access to opportunities—e.g. convenient to reliable transportation that allows people to get to jobs, schools and healthcare—contributes to healthy people and healthy neighborhoods.

• **Service Environment** - Distribution of healthcare services and other neighborhood-level services has a huge impact on the overall health of a community. Access to quality healthcare services, public safety, and community support services are all necessary for a healthy community. Reliable and regular sanitation service; mass transit that provides clean, safe, and reliable service; and responsive, caring public health providers all positively affect a community.

The CHIP Steering Committee recommended that the CHIP for Marion County should articulate a plan for structures and strategies that focus community efforts on health improvement in these areas of social determinants rather than specific disease states or narrowly defined health outcomes, with the knowledge that if a community infrastructure to attack health issues is coalesced, it could be brought to bear on specific health outcomes if needed. Additionally, the focus on social determinants and community structures for informing and educating individual health decisions as well as community policy decisions would cut across issues of many disease states and health outcomes (i.e. those identified as critical by the Community Health Status Assessment of the Marion County MAPP Community Health Needs Assessment) and would benefit all constituencies in Marion County.

As a result of MAPP community health needs assessment and CHIP planning processes, the CHIP Steering Committee identified three overarching Community Health Improvement Goals for Marion County as detailed in the next section.

**Marion County CHIP Goals, Strategies and Objectives**

The Marion County Community Health Improvement Plan (CHIP) has three (3) goals and five (5) identified strategies to achieve these goals. Unlike many strategic plans, each individual strategy is not tied to a specific goal, but rather as all three of these goals are interrelated, the strategies will work together to achieve the end state to which these goals collectively aspire. In short, all strategies will contribute to each goal.

**GOAL 1** Create community partnerships and infrastructure necessary to address the impact of social determinants on community health.

**GOAL 2** Incorporate the impact on health outcomes and overall community health when planning for community initiatives and setting policy in all social domains: economic, social, physical and service environment

**GOAL 3** Create a fully informed community that is aware of the personal and societal costs of personal health behaviors and decisions, as well as the personal and societal costs of policy decisions relating to community health.

**Strategy A** Develop an ongoing collaborative of diverse constituencies, not just those in the health sector, to address social determinants of health.

Coordinating Agency: Hospice of Marion County and Its Affiliated Companies, Inc., Mary Ellen Poe, CEO

*Objective A.1: By May 2013, an initial collaborative partnership will be formed and fully functional, with a Steering Committee comprised of the following members: Ginger Carroll, FACHE, Chief Executive Officer, West Marion Community Hospital (Ocala Health); Kerrie Jones Clark, Chief Executive Officer, (Heart of Florida Health Center); Timothy S. Dean, (Dean Law Firm, LLC); Jeff Feller, Chief Executive*
Success Indicator: A press conference and media release announcing the completion of a Community Health Needs Assessment and Community Health Improvement Plan by the target date of May 2013.

Next Steps:
- Form an ongoing community collaborative
- Identify other key partners and constituencies
- Develop a formal framework for the collaborative
- Expose key partners, key constituencies and community to the Needs Assessment and CHIP
  - Presentation to the United Way of Marion County Health, Income, and Education Councils
  - Presentation to the Marion Board of County Commissioners, local city councils, the Marion County School Board, and the Ocala/Marion County Chamber and Economic Partnership
- Recruit additional community partners for the collaborative.

Progress as of August 2014: A press conference and media release announced the completion of the Marion County Community Health Needs Assessment (CHA) and Community Health Improvement Plan (CHIP) on January 14, 2013.

In regard to the "next steps" presented with this strategy and objective, the Marion County Public Health Collaborative has grown incrementally throughout 2013-2014. Identification of other key partners and constituencies is an on-going process. Development of a formal charter for the collaborative is planned, but has not yet been accomplished. A presentation related to the CHA and CHIP was made to key community opinion leaders January 14, 2013. The same presentation was made to the Health, Income, and Education Councils of the United Way of Marion County February 19, 2013; Marion County Extension Service supervisors May 1, 2013; Ocala/Marion County Chamber of Commerce and Economic Partnership May 16, 2013; and the Marion County Children’s Alliance April 2, 2014. Recruitment of additional community partners for the Collaborative is an on-going process.

Strategy B

Develop a unified community message and focus in communicating personal health issues, behaviors and their costs to the public and conduct a coordinated campaign to inform the public on these issues.

Coordinating Agency: Florida Department of Health in Marion County, Cheryl Brown, Acting Health Director

Objective B.1: By August 2013, conduct at least two initial public presentations of an ongoing community campaign to inform the public on personal health issues, behaviors and their costs to individuals and the public.

Success Indicator: The CHIP Steering Committee will form a public health education “Speaker’s Bureau” and complete at least two scheduled public presentations to inform the public on personal health issues, behaviors and their costs to individuals and the public by August 2013. Craig Ackerman, Public Information Officer with the Florida Department of Health in Marion County will have a leading role in this endeavor.

Next Steps:
- Identify the most pressing social determinant issues
- Identify cost impact data tied to personal health issues and behaviors
- Identify key messages

Progress as of August 2014: The CHIP Steering Committee formed a public health education “Speaker’s Bureau” and completed seven scheduled presentations to inform the public about health issues, behaviors and their costs by August 2013. Craig Ackerman, Public Information Officer with the Florida Department of Health in Marion County had a leading role in this endeavor.

In regard to the "next steps" presented with this strategy and objective, as stated in the follow-up to Strategy A, public presentations with content identifying the most pressing social determinant issues, the cost impact to the community resulting from personal health issues and behaviors were made to key community opinion leaders January 14, 2013; to the Health, Income, and Education Councils of the United Way of Marion County February 19, 2013; the Marion County Extension Service supervisors May 1, 2013; the Ocala/Marion County Chamber of Commerce and Economic Partnership May 16, 2013; and the Marion County Children’s Alliance April 2, 2014. These presentations also contained key messages regarding the urgency of public health reforms in Marion County.

**Strategy C** Develop a unified community message and focus in communicating community health issues and policies to policy makers and community leaders and conduct regular coordinated campaigns to inform these constituencies on the true costs of these community health issues and policies.

Coordinating Agency: Hospice of Marion County and Its Affiliated Companies, Inc., Mary Ellen Poe, CEO

**Objective C.1:** By August 2013, implement an initial campaign, as part of an ongoing strategy, to inform policy makers and community leaders on the true costs of community health issues and health policies.

Success Indicator: The CHIP Steering Committee will utilize a public health education “Speaker’s Bureau” as a means to inform policy makers and community leaders about the true costs of community health issues and health policies on at least two occasions by the target date of August 2013. Craig Ackerman, Public Information Officer with the Florida Department of Health in Marion County will have a leading role in this endeavor.

Next Steps:

- Conduct initial presentations to Board of County Commissioners, local city councils, the Marion County School Board, and Ocala/Marion County Chamber and Economic Partnership
- Develop plan for regular and ongoing updates to the Board of County Commissioners, local city councils, the Marion County School Board, and Ocala/Marion County Chamber and Economic Partnership
- Investigate potential of annual workshop or summit on health issues and the social determinants of health

Progress as of August 2014: The CHIP Steering Committee utilizes a public health education “Speaker’s Bureau” as a means to inform policy makers and community leaders on the true costs of community health issues and health policies. Updates have been presented to leading civic on at least two occasions prior to the August 2013 target date (see response to Strategy B).

In regard to the "next steps" presented with this strategy and objective; initial presentations have been conducted for Board of County Commissioners, local city councils, the Marion County School Board, and Ocala/Marion County Chamber and Economic Partnership, and a plan has been developed for regular and ongoing updates to the entities named. To date, no Investigation has been made regarding the potential of an annual workshop or summit on health issues and the social determinants of health.
Strategy D  Enhance or develop a central source for community health resources information and referral (for patients/users and providers) with community protocols for use, and promote this system in a unified fashion.

Coordinating Agency: Florida Department of Health in Marion County, Cheryl Brown, Acting Health Director

Objective D.1: By November 2013, the collaborative partnership will fully integrate the community health information and referral system utilizing existing community information and referral resources and those of collaborative partners.

Success Indicator: The CHIP Steering Committee will partner with the managing entities of existing community information and referral resources (i.e. 211, et al) to fully integrate the community health information and referral system by the target date of November 2013.

Next Steps:

- Review existing community information and referral systems to determine if comprehensive and up-to-date health information is included
- Review community and provider use patterns of the health information portions of the formal information and referral systems to identify potential areas of improvement
- Formulate a unified community protocol among community collaborative partners for use and marketing of the formal information and referral system
- Investigate informal information and referral sources and how they may be integrated into the formal system
- Develop a system that ensures that information and referral sources are regularly updated

Progress as of August 2014: The Department has contacted the 211 managing entity and established a partnership to achieve full integration of the community health information and referral system utilizing existing community information and referral resources and those of collaborative partners.

In regard to the "next steps" presented with this strategy and objective; a review has been performed of existing community information and referral systems to determine if comprehensive and up-to-date health information is included. A review of community and provider use patterns of the health information portions of the formal information and referral systems to identify potential areas of improvement has also been accomplished. The remaining "potential Next Steps" for Strategy D have not been completed.
**Strategy E**  
Create a joint campaign that informs and educates the public on how and when to use which community health resources (for improved navigation, lower system costs and better outcomes).

**Coordinating Agency:** Hospice of Marion County and Its Affiliated Companies, Inc., Mary Ellen Poe, CEO

**Objective E.1:** By November 2013, the collaborative partnership will implement a community education campaign on how to best navigate and utilize community health resources.

**Success Indicator:** The CHIP Steering Committee will utilize a public health education “Speaker’s Bureau”, the Florida Department of Health in Marion County website, and press conferences with media releases as a means to carry out the first phase of a campaign to inform and educate the public on how and when to use which community health resources. At least two events utilizing at least one of the methods cited will be conducted by the target date of August 2013. Craig Ackerman, Public Information Officer with the Florida Department of Health in Marion County will have a leading role in this endeavor.

**Next Steps:**
- Formulate a communications plan
- Formulate a media plan
- Monitor to determine effectiveness of messaging

**Progress as of August 2014:** The Department made significant use of its website and press conferences with media releases in carrying out the first phase of its campaign to inform and educate the public. At least two events utilizing at least one of the methods cited was conducted by the target date of August 2013. Craig Ackerman, the Department's Public Information Officer had an important role in this endeavor.

In regard to the "next steps" presented with this strategy and objective; a communications plan and media plan have not yet been formulated due to similar plans being modeled by the integrated Florida Department of Health headquarters in Tallahassee, Florida. Craig Ackerman, the Department Public Information Office routinely monitors the effectiveness of messaging, measured by "media exposure" granted by local and regional media outlets (newspapers, radio and television).

**Planning for the Future Health of Care in Marion County**

The CHIP is a plan for the entire public health care system in the communities that comprise Marion County. All of our residents are stakeholders in the system—state and local government, health care providers, employers, community groups, colleges and schools, individuals and families. The CHIP allows loosely-networked system partners to coordinate for more efficient, targeted and integrated health improvement efforts.

As a result of the annual evaluation of our implementation progress, policy changes have been made and, in some cases new policies have been developed as needed to accomplish the health strategies and objectives included in the CHIP.

**Policy changes:**
While the Florida Department of Health in Marion County became a *de facto* lead for the initiation of the original Community Health Needs Assessment and CHIP, it has been resolved that the community health system must be championed by a broad spectrum of community partners.

**New policy:**
Broader participation by community partners is needed for revitalization of the Marion County health system to be realistically achievable; therefore, the CHIP Steering Committee will seek additional
members from business, education, and faith-based organizations (see "What Community Partners Can Accomplish by Working Together," page 14).

No other policy changes are indicated at this time, due to the fact that sufficient data for decision-making is still not available at this stage of the CHIP implementation.

A Call to Action

As stated in Robert Wood Johnson’s 2010 portfolio about vulnerable populations A New Way to Talk about the Social Determinants of Health:

“...No institution alone can restore a healthy America that nurtures families and communities. That will require leadership, and a partnership of business, government and civic and religious institutions.”

Members of the CHIP Steering Committee and the Core Community Support Team who initiated the MAPP needs assessment and who worked on this community health improvement plan realized that the first “next step” must be to expand the current community partnerships, infrastructure and collaboration to lead efforts to implement this plan and actualize the vision of:

- Increasing the visibility of public health and an understanding of what the “local public health system” truly is.
- Encouraging the business community and employers to take a greater leadership role in the health of their employees and the communities in which they live.
- Building a stronger local public health infrastructure.
- Engaging the community and creating community ownership for community health issues.
- Creating a healthier community, better quality of life and healthier lives for all in Marion County.

We still hold the premise stated in the original "Call to Action" to be true as we strive for results in 2014.

Accountable persons and organizations have been designated to champion or coordinate implementation of the strategies in the CHIP. This has been widely communicated during 2013-2014, as was evidenced by the following excerpts from a Florida Department of Health in Marion County press release dated March 20, 2013, with the headline, “County Health Rankings Reinforce Need for Communitywide Health Improvement Effort”:

“As we track our progress, we are reminded there is no finish line in our efforts for better health.” Marion County leaders have come together to work toward a healthier community after hearing the results of Marion’s Community Health Improvement Plan. The plan addresses community health problems and provides a strategy for improvement. It follows research published in the Marion County Health Needs Assessment, as well as the County Health Rankings. The Florida Department of Health in Marion County, in partnership with the United Way of Marion County, is leading the charge to improve the health of the community by drawing from the expertise of the community.

“These problems aren’t new in Marion County,” said Maureen Quinlan, president of the United Way of Marion County. “This report reinforces the need for the entire community to work together to improve health in Marion County. This is why the United Way is using the Community Health Improvement Plan as our framework for identifying needs and finding solutions in Marion County. With the entire community involved, we can put all our resources together and have the best chance to deliver solid, long-lasting results.”

“The health of the community isn’t just a Health Department project,” said Dr. Nathan Grossman, health department director (retired). “No single organization owns this; the entire community has to take
ownership of its health. Transforming the health of the residents of Marion County will happen as the entire community transforms itself to think of health as more than just health care.”

Much of the effort required to launch the collaborative community partnerships still rests with the original CHIP Steering Committee in 2014 (see the acknowledgements page in the plan); however, as new partners are designated from Marion County businesses, local and state government, philanthropic organizations, education, community and faith-based organizations they will help increase the momentum of our efforts to transform the health system in Marion County.

**WHAT COMMUNITY PARTNERS CAN ACCOMPLISH BY WORKING TOGETHER**

There is renewed national awareness of what state and local government, the private sector, philanthropic organizations, community and faith-based organizations, and concerned individuals can do to improve public health when we act in a united way as partners.

**State and Local Governments Can:**

- Facilitate collaboration among diverse sectors (e.g., planning, housing, transportation, energy, education, environmental regulation, agriculture, business associations, labor organizations, health, and public health) when making decisions likely to have a significant effect on health.
- Include health criteria as a part of decision making (e.g., policy making, land use, and transportation planning).
- Conduct comprehensive community health needs assessments and develop state and community health improvement plans.
- Strengthen and enforce housing and sanitary code requirements and ensure rapid remediation or alternative housing options.
- Participate in national voluntary accreditation of health departments.
- Increase delivery of clinical preventive services by Medicaid and Children’s Health Insurance Program (CHIP) providers.
- Foster collaboration among community-based organizations, the education and faith-based sectors, businesses, and clinicians to identify underserved groups and implement programs to improve access to preventive services.
✓ Create interoperable systems to exchange clinical, public health, and community data, streamline eligibility requirements, and expedite enrollment processes to facilitate access to clinical preventive services and other social services.

✓ Use data to identify populations at greatest risk and work with communities to implement policies and programs that address highest priority needs.

✓ Improve coordination, collaboration, and opportunities for engaging community leaders and members in prevention.

**Businesses and Employers Can:**

✓ Ensure that homes and workplaces are healthy, including eliminating safety hazards, ensuring that buildings are free of water intrusion, indoor environmental pollutants (e.g., radon, mold, tobacco smoke).

✓ Adopt practices to increase physical activity and reduce pollution (e.g., workplace flexibility, rideshare and vanpool programs, park-and-ride incentives, telecommuting options).

✓ Identify and implement green building siting, design, and construction that over time will improve the environment and health.

✓ Adhere to best practices to promote safety and health, including participatory approaches to hazard identification and remediation as well as supervisory and worker training.

✓ Provide incentives for employees and their families to access clinical preventive services.

✓ Provide opportunities for workplace prevention activities, including preventive screenings.

✓ Partner with local resources such as libraries and literacy programs to enhance employees’ ability to identify and use reliable health information.

**Community, Non-Profit, and Faith-Based Organizations Can:**

✓ Convene diverse partners and promote strong cross-sector participation in planning, implementing, and evaluating community health efforts.

✓ Implement processes to ensure that people are actively engaged in decisions that affect health.

✓ Inform people about the range of preventive services they should receive and the benefits of preventive services.

✓ Support use of retail sites, schools, churches, and community centers for the provision of evidence-based preventive services.

✓ Expand public-private partnerships to implement community preventive services (e.g., school-based oral health programs, community-based diabetes prevention programs).

✓ Support community health workers, patient support groups, and health coaches.

✓ Bring together professionals from a range of sectors (e.g., transportation, health, environment, labor, education, and housing) with community representatives to ensure that community health needs and barriers are addressed.

✓ Help ensure that prevention strategies are culturally, linguistically, and age appropriate, and that they match people's health literacy skills.
Health Care Systems, Insurers and Clinicians Can:

 ✓ Partner with state and local governments, business leaders, and community-based organizations to conduct a comprehensive community health needs assessment and develop community health improvement plans.

 ✓ Support integration of prevention and public health skills by cross-training health care practitioners to implement prevention strategies.

 ✓ Inform patients about the benefits of prevention services and offer recommended clinical preventive services.

 ✓ Adopt and use certified electronic health records and personal health records.

 ✓ Establish patient reminder systems for preventive services (e.g., mailing cards, sending e-mails, or making phone calls when a patient is due for a preventive health service and electronic clinical health records with reminders or cues).

 ✓ Create linkages with and connect patients to community resources (e.g., tobacco quit lines), family support, and education programs.

 ✓ Facilitate coordination among diverse care providers (e.g., clinical care, behavioral health, community health workers, complementary and alternative medicine).

 ✓ Communicate with patients in an appropriate manner so that patients can understand and act on their advice and directions.

 ✓ Train and hire more qualified staff from underrepresented racial and ethnic minorities and people with disabilities.

Early Learning Centers, Schools, Colleges and Universities Can:

 ✓ Integrate appropriate core public health competencies into relevant curricula (e.g., nursing, medicine, dentistry, allied health, pharmacy, social work, education) and train professionals to collaborate across sectors to promote health and wellness.

 ✓ Implement policies and practices that promote healthy and safe environments (e.g., air quality, mold problems, reducing exposure to pesticides and lead, ensuring that drinking water sources are free from bacteria and toxins, implementing and enforcing tobacco-free policies).

 ✓ Train providers (e.g., doctors, nurses, dentists, allied health professionals) to use health information technology and offer patients recommended clinical preventive services as a routine part of their health care.

 ✓ Conduct outreach to increase diversity (e.g., racial/ethnic, income, disability) in health care and public health careers.

 ✓ Develop and implement local strategies to reduce health, social, and environmental conditions that affect school attendance and chronic absenteeism.

Individuals and Families Can:

 ✓ Visit their health care providers to receive clinical preventive services.

 ✓ Access various media to learn about health and prevention.
Use alternative transportation (e.g., biking, walking, public transport, car pooling).

Purchase energy efficient products, support local businesses, and recycle.

Participate in community prevention efforts.

Use community resources (e.g., libraries, literacy programs) to improve their ability to read, understand, and use health information.

**Afterword**

The Marion County Community Health Improvement Plan includes an *Annual Evaluation Report*, documenting progress made during 2013-2014 related to CHIP implementation and monitoring of performance measures (see Appendix B).

In order to monitor progress on implementation of strategies in the CHIP, the DOH-Marion Quality and Performance Improvement Office polled stakeholders and partners in the Marion County health system in its effort to assess progress made on implementing strategies included in the community health improvement plan and community efforts to take the “next steps” proposed in the plan.

Recognizing that the CHIP is a dynamic plan has great significance for the success of the community collaborative. The plan will need periodic revision based on completed objectives, newly identified priorities, a change in responsibilities, or a change in resources and assets available within the community. All aspects of the plan, and its identified tasks and timelines are periodically monitored for progress, and adjustments have been, and will continue to be made when indicated to ensure that the plan remains relevant to community health needs. All changes will be made in collaboration with partners and stakeholders from City of Ocala/Marion County.

In addition to the public health priorities, goals, strategies and objectives originally included in the plan, measurable progress indicators have been incorporated in order to effectively monitor implementation of the CHIP strategies.

Arguably, implementation of the health improvement plan is one of the most important parts of the process. The CHIP Steering Committee recognizes the critical importance of monitoring, reviewing and reporting on implementation progress. While overall responsibility for achieving progress rests with the Steering committee, the committee members concur that the appropriate agency for monitoring CHIP strategies is the health department. The CHD Quality Assurance and Performance Improvement office monitors progress on implementing the strategies included in the plan and reports to the Steering Committee.

The following S.M.A.R.T. objectives* have been added to the CHIP (see Appendix A):

**Objective 8.1.3:** An annual a report of progress on implementing strategies included in the Community Health Improvement Plan (CHIP) will be developed by the Florida Department of Health in Marion County in partnership with a cross-section of stakeholders in the plan and delivered to the CHIP Steering Committee.

**Objective 8.1.4:** An annual report of the actions taken related to implementation of strategies to improve health (as stated in the Marion County Community Health Improvement Plan) will be developed by the Florida Department of Health in Marion County in partnership with a cross-section of stakeholders cited in the plan and delivered to the CHIP Steering Committee.
Objective 8.1.5: Semi-annually, a health improvement strategy planning session will be convened by the CHIP Steering Committee to discuss: “How are we doing, what is going well, and why, what is not going well, and why, and what changes or improvements are needed regarding the plan strategies”.

*Specific, Measurable, Attainable, Realistic, Timely

**ACTION ITEM FOR PRODUCING THE CHIP UPDATE:** Florida Department of Health in Marion County

**COORDINATING AGENCY:** Hospice of Marion County and Its Affiliated Companies

**PARTNERS AND STAKEHOLDERS**

**MARION COUNTY:** Access to Healthcare, Inc, Heart of Florida Health Center, Hospice of Marion County and Its Affiliated Companies, Inc., Florida Department of Health in Marion County, Marion County Parks and Recreation, Marion County Sheriff’s Office, Munroe Regional Medical Center, Ocala Health, The Centers, West Marion Community Hospital, and the residents of Marion County

**STATE & NATIONAL:** American Red Cross, Army Corps of Engineers, Air Force, Centers for Disease Control and Prevention (CDC), Civil Air Patrol, Coast Guard, Customs and Boarder Protection, Homeland Security, Humane Society, Disaster Center, Department of Defense, Department of Energy, Department of Justice, Environmental Protection Agency, Federal Bureau of Investigation (FBI), Federal Communications Commission (FCC), FEMA, Health and Human Services (HHS), Army National Guard, Marine Corps, Navy, Salvation Army, U.S. Department of Agriculture (USDA), USDA Fire Service
CHIP Alignment with National, State and Local Priorities

Aligned with:
- The National Prevention Strategy (NP)
- Healthy People 2020 (HP2020)
- Florida State Strategic Plan (DOH)
- Florida State Health Improvement Plan (SHIP)
- Florida Sterling Council (FSC)
- Florida Governor’s Priorities (FGP)
- Public Health Accreditation Board (PHAB) Standards & Measures

Key Strategy or Objective

Strategic Issue Area: Health Protection and Promotion

Goal 1: Protect the Population from Health threats.

<table>
<thead>
<tr>
<th>Strategy</th>
<th>Objective</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Strategy 1.1</strong>: Prevent and control infectious disease.</td>
<td>Objective 1.1.1: By Dec. 31, 2015, increase the percentage of two-year-olds who are fully immunized from 86.6% (2011) to 90%. (NP, SHIP, HP2020, FGP)</td>
</tr>

<tr>
<td>Objective 1.1.23:</td>
<td>By Dec. 2015, amount of CHD wasted/spoiled/expired vaccine will be equal to or less than 3% or $5,000; whichever is smaller. (<a href="#">DOH, SHIP</a>)</td>
</tr>
</tbody>
</table>

**Strategy 1.2:** Prevent and reduce illness, injury and death related to environmental factors.

<table>
<thead>
<tr>
<th>Objective 1.2.1:</th>
<th>By Dec. 31, 2014, Annual Comprehensive Environmental Health Score (ACEHS) will be 90% or greater. (<a href="#">DOH, SHIP</a>)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Objective 1.2.2:</td>
<td>By Sept. 30, 2014, and annually ensure that 90% of illness outbreaks associated with a regulated facility have an environmental assessment or inspection done within 48 hours of initial outbreak report. (<a href="#">DOH, SHIP</a>)</td>
</tr>
<tr>
<td>Strategy 1.2: Environmental Public Health Performance</td>
<td>Objective 1.2.3: By Dec. 31, 2014, the CHD will complete the Environmental Public Health Performance assessment, use data to determine gaps and opportunities, and create health plans. <em>(DOH, SHIP)</em></td>
</tr>
<tr>
<td>----------------------------------------------------</td>
<td>--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Strategy 1.3: Minimize loss of life, illness, and injury from natural or man-made disasters. <em>(SHIP)</em></td>
<td>Objective 1.3.1: By Dec. 2014, CHD will achieve a composite annual preparedness score of 5.0. <em>(SHIP, DOH)</em></td>
</tr>
<tr>
<td>Strategy 1.4: Ensure that systems and personnel are available to effectively manage all hazards. <em>(SHIP)</em></td>
<td>Objective 1.4.1: Annually, ensure pre-identified staff covering Public Health and Medical incident management command roles can report to duty within 60 minutes or less. <em>(SHIP)</em></td>
</tr>
<tr>
<td>Strategy 1.5: Prevent and reduce intentional and unintentional injuries.</td>
<td></td>
</tr>
</tbody>
</table>

**Goal 2: Reduce Chronic Disease Morbidity and Mortality. *(HP2020)*

**Strategy 2.1:** Increase the proportion of adults and children who are at a healthy weight. *(HP2020)*

Objective 2.1.1: By Dec. 31, 2015, increase the percentage of adults who have a healthy weight from 34.9% (2010) to 40.0%. Note: a healthy weight is a Body Mass Index (BMI) of 18.5 to 24.9. *(NP, HP2020)*

Objective 2.1.2: By Dec. 31, 2015, decrease the percentage of WIC children aged 2 and above who are overweight or at risk of overweight from 29.5% (2010) to 28.5%. *(SHIP)*

Objective 2.1.3: By Dec. 31, 2015, increase the percentage of students in grades 1, 3, and 6 who are identified as being at normal weight from 60% (2011-2012) to 63%.
Objective 2.1.4: By Dec. 31, 2015, decrease the percentage of students in grades 6-12 reporting BMI at or above the 95th percentile from 11.6% (2010) to 10%.

**Strategy 2.2: Reduce illness, disability, and death related to tobacco use and secondhand smoke exposure. (NP, DOH, SHIP, HP 2020)**

Objective 2.2.1 By Dec. 31, 2015, reduce current smoking rates among adults from 17.1% (2010) to 14.5%. *(NP, DOH, SHIP, HP2020)*

Objective 2.2.2 By Dec. 31, 2015, reduce current cigarette use among youth, ages 11-17, from 8.3% (2010) to 7.5%. *(SHIP, HP2020)*

Objective 2.2.3 By Dec. 31, 2015, reduce the percentage of adults who were exposed to secondhand smoke at home during the past 7 days from 8.6% (2010) to 7.7%. *(SHIP, HP2020)*

Objective 2.2.4 By Dec. 31, 2015, reduce the percentage of youth, ages 11-17, who were exposed to secondhand smoke in a room or car during the past 7 days from 50.3% (2010) to 45.3%. *(SHIP, HP2020)*

Objective 2.2.5 By June 30, 2015, reduce the percentage of youth, ages 11-17, who use tobacco products *other than cigarettes from 14.1% (2010 Florida Youth Tobacco Survey) to 12.7%. *(SHIP, HP2020)*

*Other tobacco products include smokeless tobacco, snus, and cigars*

Objective 2.2.6 By June 30, 2015, reduce the percentage of adults who use tobacco products *other than cigarettes from 5.6% (2008 BRFSS) to 4.8%. *(SHIP, HP2020)*

*Other tobacco products include smokeless tobacco, snus, and cigars*

---

**Goal 3: Improve Maternal and Child Health.**

**Strategy 3.1: Reduce infant mortality.**

Objective 3.1.1 By Dec. 31, 2015, reduce the infant mortality rate from 6.4 (2011) per 1,000 live births to 6.1. *(SHIP)*

Objective 3.1.2 By Dec. 31, 2015, reduce the black infant mortality rate from 12.0 (2011) per 1,000 live births to 10.9. *(SHIP, PHAB)*

**Strategy 3.2: Increase the proportion of adults and children who are at a healthy weight. (No current CHD Objective)**

**Strategy 3.3: Meet special health care needs of children. (No current CHD Objective)**
Objective 3.3.2 By Dec. 31, 2015, increase the percentage of 8-year-old Medicaid-eligible children who have received dental sealants on their molar teeth from 14% (2010) to 17%. *(SHIP)*

Objective 3.3.3 By Dec. 2014, increase the percent of WIC infants who were ever breastfed to 81.9%. *(SHIP)*

Objective 3.3.4 By Dec. 2015, decrease percent of repeat births to mothers ages 15 to 19 to 14%.

Objective 3.3.5 By Dec. 2015, decrease percent of late or no prenatal care to no more than 5.5%.

---

**Strategic Issue Area: Financial and Business Excellence**

**Goal 4: Improve Efficiency and Effectiveness.**

**Strategy 4.1:** Adopt certified electronic health record software.

Objective 4.1.1: By June 30, 2014, all CHD clinical sites will have adopted the DOH certified Electronic Health Record. *(SHIP)*

**Strategy 4.2:** Connect agency providers and electronic health record systems in a network that consists of a state-level Health Information Exchange (HIE), Direct Secured Messaging and local health information exchanges and gateways.

*(Strategy and Objectives addressed at state level)*

**Strategy 4.3:** Implement tools, processes and methods that support accountability and provide transparency in DOH administrative management systems.

Objective 4.3.1: By Dec. 2014, supervisors and employees will achieve 90% compliance in certifying accuracy of time recorded on EARS/DARS within 7 calendar days of end of pay period. *(DOH, SHIP)*

---

**Goal 5: Maximize Funding to Accomplish the Public Health Mission.**

**Strategy 5.1:** Maximize Medicaid and other third party revenue to help the CHD retain the infrastructure necessary to meet public health needs of the Marion County communities it serves.

*(Strategy and Objectives addressed at state level)*

**Strategy 5.2:** Review and update fee policies and fee schedules.

*(Strategy and Objectives addressed at state level)*

**Strategy 5.3:** Connect agency providers and electronic health record systems in a network that consists of a state-level Information Exchange and Direct Secured Messaging and local health information exchanges and gateways.

*(No current CHD Objective)*
**Strategy 5.4:** Use *information technology and systems* to efficiently support disease prevention, intervention and epidemiological activities.

†See Strategy above  
(No current CHD Objective)

**Strategy 5.5:** Use *public health information technology and systems* to efficiently improve business practices.

†See Strategy above  
Objective 5.5.2: By Dec. 2014, achieve 100% recovery of data on annual electronic data recovery test. *(PHAB)*

†See Strategy above  
Objective 5.5.3: By Dec. 2013, percentage of items in compliance with DOH information security and privacy standards, as defined in the annual information security and privacy assessment will be 100%. *(SHIP, PHAB)*

**Strategy 5.6:** Effectively manage Schedule C OCA cash balances.

†See Strategy above  
Objective 5.6.1: By Dec. 2014, CHD will be compliant with requirement of Schedule C OCA cash balances related to Federal funds – zero balance 60 days after grant period ends.

†See Strategy above  
Objective 5.6.2: By Dec. 2014, CHD will be compliant with requirement of Schedule C OCA cash balances related to State General Revenue and Trust funds – no negative cash balance.

**Goal 6:** Promote a Culture of Organizational Excellence.

**Strategy 6.1:** Collect, track and use performance data to inform business decisions and continuously improve performance and quality. *(PHAB)*

†See Strategy above  
Objective 6.1.1: By Dec. 31, 2015, Marion CHD will adopt and utilize the DOH performance management data system. *(SHIP)*

**Strategy 6.2:** Maintain a sustainable performance management framework. *(PHAB)*

†See Strategy above  
Objective 6.2.1 By Dec. 31, 2015, implement the components of a sustainable quality assurance system. *(PHAB)*
<table>
<thead>
<tr>
<th>Objective</th>

</tr>
</tbody>
</table>

**Strategy 6.6:** Integrate planning and assessment processes to maximize partnerships and community expertise in accomplishing goals. (NP, SHIP, PHAB)
Objective 6.6.1: By Dec. 31, 2014, increase public health presence in the local planning process by ensuring all CHDs will attend a minimum of one county planning board, planning review committee, or regional planning meeting.

**Strategy 6.7:** Support local efforts to revitalize communities.

**Goal 7: Optimize Communications.**

**Strategy 7.1:** Develop, implement and improve internal and external communication strategies and plans.

Objective 7.1.1: By Dec. 31, 2014, Marion CHD will deploy DOH rebranding to support unified messaging.

Objective 7.1.2: By Dec. 31, 2015, evaluate internal and external communications tools and resources.

**Strategic Issue Area: Service to Customer and Community**

**Goal 8: Promote an Integrated Public Health System.**

**Strategy 8.1:** Implement and link health improvement planning at state and local levels.

Objective 8.1.3: An annual report of progress on implementing strategies included in the Community Health Improvement Plan (CHIP) will be developed by the Florida Department of Health in Marion County in partnership with a cross-section of stakeholders in the plan and delivered to the CHIP Steering Committee.

(Handed in included in the Marion County Community Health Improvement Plan)

Objective 8.1.4: An annual report of the actions taken related to implementing strategies to improve health (as stated in the CHIP) will be developed by the Florida Department of Health in Marion County in partnership with a cross-section of stakeholders cited in the plan and delivered to the CHIP Steering Committee.

(Handed in included in the Marion County Community Health Improvement Plan)

Objective 8.1.5: A semi-annual health improvement strategy planning session will be convened by the CHIP Steering Committee to discuss: “How are we doing?, What is going well, and why?, What is not going well, and why?, and What changes or improvements are needed regarding the plan strategies?”

(Handed in included in the Marion County Community Health Improvement Plan)
Goal 9: Maximize Partnerships and Expertise of the Community in Improving Health.

**Strategy 9.1:** Include a public health component in community planning processes to increase awareness and opportunity for the built environment to impact healthy behaviors. *(SHIP)*

†See Strategy above

Objective 9.1.1: By Dec. 31, 2015, the CHD will have public health attendance in community planning processes, including the Marion County planning board. *(SHIP, DOH, PHAB)*

**Strategy 9.2:** Share effective strategies and messages that support the connection between the built environment and healthy behaviors. *(SHIP, DOH, PHAB)*

†See Strategy above

Objective 9.2.1: By December 31, 2014, the CHD will conduct training and/or educational presentations about the health benefits of the community resulting from the built environment. *(SHIP, DOH, PHAB)*

**Strategy 10.1:** Increase access to care for underserved populations.

†See Strategy above

Objective 10.1.1: By Dec. 31, 2015, Marion CHD in conjunction with local coalitions will develop a written plan to address the county’s safety net primary health care needs. The plan should address primary care and oral health care provider roles in the community based on the assessment completed in objective 8.1.1, and be updated annually. *(DOH, SHIP, PHAB)*

†See Strategy above

Objective 10.1.3: By Dec. 2015, Increase the percentage of teen CHD family planning clients who adopt an effective or higher method of birth control to 85%. *(DOH)*

†See Strategy above

Objective 10.1.4: By Dec. 2015, increase the percentage of CHD family planning clients served who have documentation of race and ethnicity in their records to 95%. *(SHIP)*

**Strategy 10.2:** Provide equal access to culturally and linguistically competent care. *(SHIP, HP2020)*

†See Strategy above

Goal 11: Expeditiously License All Healthcare Professionals Who Meet Statutorily Mandated Standards of Competency.

**Strategy 11.1:** Provide an efficient licensure process that meets statutory requirements.  
*(Strategy and Objectives addressed at state level)*

---

**Strategic Issue Area: Workforce Development**

Goal 12: Attract, Recruit and Retain a Competent and Credentialed Workforce.

**Strategy 12.1:** Implement a competency-based framework for recruitment and training.

†See Strategy above

Community Health Improvement Plan (CHIP)
Evaluation of Progress in Implementing Strategies

1.0 Overview
This Annual Evaluation Report addresses the requirements of Measure 5.2.4 A in the Public Health Accreditation Board (PHAB) Standards & Measures, Version 1.0.

“5.2.4.A Monitor progress on implementation of strategies in the community health improvement plan in collaboration with broad participation from stakeholders and partners.”

The purpose of this report is to assess the efforts of the Florida Department of Health in Marion County to ensure that the implementation of the Community Health Improvement Plan (CHIP) is evaluated, and that the plan is revised as indicated by those evaluations.

The reason we conduct this evaluation is – effective implemented plans are dynamic. The Marion County CHIP may need periodic revision based on a completed objective, a newly identified priority, a change in responsibilities, a change in resources and assets, or as is the case for this annual evaluation, changes are needed to conform to the requirements for National Public Health Accreditation.

All aspects of the CHIP, and its identified tasks and timelines, are monitored for progress by the Florida Department of Health in Marion County Office of Quality Assurance and Performance Improvement, in collaboration with the CHIP Steering Committee, which represents a broad spectrum of community stakeholders, partners and opinion leaders in our community. Adjustments will be made as indicated by this evaluation to ensure that the plan remains relevant.

2.0 Evaluation Methodology
Throughout 2013-2014, the Marion County CHIP Steering Committee and its diverse community partners worked together to implement the strategies set forth in the Community Health Improvement Plan (CHIP).

The collaboration included the West Marion Community Hospital, Heart of Florida Health Center, Access to Healthcare, Inc., Marion County Parks and Recreation, Hospice of Marion County and Its Affiliated Companies, Inc., The Centers, Munroe Regional Medical Center, Ocala Health, Marion County Sheriff’s Office, and many members of the Marion community.

The CHIP update process began with a comprehensive review of the Marion County Health Needs Assessment (CHA). The CHIP Steering Committee accessed current data provided by the County Health Rankings & Roadmaps (a collaboration between the Robert Wood Johnson Foundation and the University of Wisconsin Population Health Institute), U.S. Census Bureau 2012 estimates, the Centers for Disease Control (CDC), and Florida Charts (a community health assessment resource tool maintained by the integrated Florida Department of Health), in conducting the community health needs assessment.

Steering committee members presented the health needs assessment and improvement plans to community stakeholders and opinion leaders during a Jan. 14 meeting at the United Way of Marion County.

The CHIP addresses community health problems and provides strategies for improvement. It primarily reflects the research data published by the Robert Wood Johnson/University of Wisconsin County Health Rankings & Road Maps.
In order to conduct this annual evaluation of CHIP implementation progress, the CHIP Steering Committee was reconvened in March 2014 to revisit the data and information elements of the community health needs assessment, and gauge CHIP impact on the Marion County Health system to date. This review determined whether satisfactory progress is being made in implementing the CHIP, including:

- Progress related to health improvement strategies
- Monitoring of health outcomes
- Conformance with PHAB Standards and Measures related to the CHIP

The CHIP Steering Committee utilized in-person and online work sessions to identify and prioritize possible issues, and to propose corrective actions. The Steering Committee has taken some critical steps to preserve the momentum achieved, and to make adjustments to the CHIP to ensure that the plan remains relevant.

All changes are being developed in collaboration with the diverse community partners and stakeholders involved in the CHIP planning process.

As required by PHAB Measure 5.2.4 A, the Florida Department of Health in Marion County has the task of providing annual evaluation reports on progress in implementing the CHIP.

This report documents the implementation progress, including:

- Progress in meeting specific objectives
- A description of the progress made on carrying out strategies
- Changes to the plan needed to ensure that the requirements for national public health accreditation as set forth in the PHAB Standards & Measures, Version 1.0 are, or will be met
- Identification of critical “next steps”

### 3.0 Progress Results Related to “Next Steps” Cited in the CHIP

While it may take at least another year to show measurable progress for some health indicators defined in the plan, and the Marion County CHIP is still in the early stages of implementation, there is progress to be reported:

#### 3.1 Formation of an ongoing community collaborative

As a result of the 2013–2014 annual evaluation of our implementation progress, policy changes have been made and, in some cases new policies have been developed as needed to carry out the health strategies included in the CHIP.

While the Florida Department of Health in Marion County became a *de facto* lead for the efforts related to the first editions of the Community Health Needs Assessment and CHIP, it has been resolved that the community health system must be championed by a broad spectrum of community partners.

A larger cross-section of community partners is needed for revitalization of the CHIP implementation; therefore the CHIP Steering Committee is actively seeking additional members from business, education, faith-based and other organizations.

#### 3.2 Identification of the most pressing issues related to social determinants

The CHIP Steering Committee reconvened during the period March – June 2013 to allow stakeholders and partners in the Marion County health system to participate in the task of assessing progress made on
implementing strategies included in the community health improvement plan and community efforts to take the “next steps” proposed in the plan. Recognizing the limited community resources available at this early stage of implementation, the committee members have identified a list of key health issues identified during the Marion County health needs assessment process that can be addressed at the local level with the community resources currently available.

3.3 Communication of key messages to the Marion community – The CHIP Steering Committee has added a new member from the Department whose primary responsibility is health education in the community at large. In addition, the Marion CHD Public Information Officer has been instrumental in creating a speaker’s bureau charged with carrying key messages directly to leaders within the business and faith-based sectors of the community.

3.4 Conducting presentations to Board of County Commissioners, local city councils, the Marion County School Board, and Ocala/Marion County Chamber of Economic Partnership promoting the "Healthiest Weight" initiative – Excellent progress can be reported in this important area. The speaker’s bureau has been very active in scheduling and presenting messages to these governing entities positioned to “make a difference” in Marion County.

3.5 Regular and ongoing updates to the Board of County Commissioners, local city councils, the Marion County School Board, and Ocala/Marion County Chamber and Economic Partnership – See paragraphs 3.3, 3.4 and 3.6.

3.6 Investigation of a potential annual workshop or summit on health issues and the social determinants of health – The Steering Committee will pursue the possibility of sponsoring a public forum for issues related to the Marion County health care system.

3.7 Description of other actions and/or changes that will result from the progress evaluation:
